

# ST-6500-CC/C7

Two new open modular POS

Ideal engines for varied customer needs thanks to an open architecture.

The ST-6500-CC and ST-6500-C7 are the new open POS terminals from TOSHIBA TEC. Like the previous range topping model the ST-6500-C5, these upgraded versions offer retailers a real advantage in an increasingly competitive market.

With this in mind the upgraded ST-6500 variants offer the latest technological developments in a compact design, including peripheral device power management.

TOSHIBA TEC Europe has a well-established reputation as a leading manufacturer of quality and innovative POS systems, resulting in products that provide functionality, reliability and miniaturisation, which is so important to both the retail and hospitality industries.

# ST-6500 CC/C7

## Speed & connectivity

The ST-6500-CC is equipped with a super fast 1.2 GHz Intel Celeron™ processor (embedded to give efficiency and reliability) and a 32-bit PCI bus thus accelerating response time, while its high capacity memory of up to 512 MB reduces paging - two features, which help to eliminate bottlenecks. As far as connectivity is concerned, the ST-6500-CC comes as standard with a fast on-board 10Base-T/100Base-TX network adapter.

## Compact & Secure

- The ST-6500-CC integrates more power and features than its predecessor, in a very small footprint maximising selling space. The built-in video card makes this new POS as compact as possible. It also integrates a CD-R/W.
- To optimise security, TOSHIBA TEC offers an optional internal UPS while the front panel cover of the new ST-6500-CC comes with a key lock as standard, preventing unauthorised access to the floppy drive and power switch.
- Its design and versatility make the ST-6500-CC the POS of choice for most retailers.

## Eco-friendly power-off status

It is possible to power-on/off the ST-6500-CC via the network using the 'Wake on LAN function'. This new eco-friendly feature enables data collection without leaving the power on overnight. It removes the need for staff to be present during data collection.

## Total cost of ownership (TCO)

- Equipped with a super fast processor, network adapter and large capacity storage, the ST-6500-CC offers flexible connectivity capabilities accommodating the large sophisticated databases and applications typical of modern competitive retail environments.
- Its latest technological features and its open architecture help retailers by maximising their efficiency and reducing their total cost of ownership.
- For small store environments, where space is at a real premium, the power and connectivity of the ST-6500-CC/C7 models allows a Back Office application to be run at the till point, thus saving the need for a Back Office PC.
- The ST-6500-C7 provides a lower-cost option, while still providing exemplary levels of performance and reliability as a result of the advanced design and dedicated chipset optimised for POS applications.

## Productive operating environments - ST-6500-CC/C7

- The ST-6500-CC/C7 are compatible with Microsoft MS-DOS and Windows operating systems, and with legacy software provided that they can run at higher speeds.
- Based on an 'open' architecture, the ST-6500-CC/C7 can run both off-the-shelf applications and specific software developed by Value Added Resellers for niche retail sectors.
- As a key member of the OLE POS Committee, TOSHIBA TEC continuously promotes the standardisation of drivers for peripheral devices for the retail market. This standardisation in turn provides the versatility and convenience of application development for VAR and software developers allowing the flexibility to use peripherals from different manufacturers in one system.
